Teacher	Subject	Grade / Section	Date / Period	Unit / Topic
Mr. Ashraf Elbialy	Computer Studies (DigiChamps L10)	Grade 10 - Classes 10/1 to 10/6	Wk 8 (11-15 Oct 2026) - Period 1	Unit 2 - 2.2 Advance Photo Editing
Pacing (2-1-1-2): ☒ On plan ☐ Ahead ☐ Behind Weeks ahead / behind: 0 Week / lesson: Week 8 / Lesson 1 of 2		Starting point (2-2-1-3): What did my last check (quiz, exit ticket, homework) show — and what am I changing today because of it? Uploads: 80% submitted; credits improving. Exit check showed filters secure. Today: colour correction and repair tools, with an export routine.		

1 OUTCOMES — What must students learn?

Desired learning outcome(s) — trace to the curriculum / standard and the table of specifications (ToS)

Students improve colour (Color Enhance, Color Balance), straighten an image, and repair photos with Red Eye Removal, Clone and Despeckle; export .png/.gif. Sprint 2.2 obj. 1-5; Challenges 1-3; CSTA 3A-DA-09.

Key knowledge / skill / understanding:

Colour = RGB values; Clone is a Paint tool copying pixels; Despeckle reduces noise; .gif limited to 256 colours.

Success criteria — what will successful learning look / sound like?

I can balance colour by range (shadows/midtones/highlights); I can straighten with the Measure tool; I can use 2 of 3 repair tools; I export in the right format.

Likely misconception / access or challenge need:

Brightness = colour balance; Clone = copy/paste a layer; red eye can't be fixed.

2 PROOF — What will students do to show they have learned it? Three activities, each with a DIFFERENT strategy, resource and evidence tool. Then tick the Coverage Check on page 2.

ACTIVITY 1 student task + evidence of learning	ACTIVITY 2 student task + evidence of learning	ACTIVITY 3 student task + evidence of learning
Strategy: Storytelling ☒ Time: 6 min	Strategy: Stations / carousel ☒ Time: 24 min	Strategy: Cooperative learning ☒ Time: 7 min
What students will do: 'Tina's family photo' (exercise Q3): a tilted, dull flash photo with red eyes. Students list what is wrong and which tool fixes each problem on whiteboards.	What students will do: Four repair stations (6 min each): 1) Color Enhance + Color Balance, export .png; 2) Measure tool > Straighten; 3) Red Eye Removal with Threshold; 4) Clone a pattern (Ctrl+click) or Despeckle a noisy scan, export .gif.	What students will do: Groups make a 'repair guide' card for one tool (menu path, 3 steps, one tip) and post it on Teams as a class help library for the Unit 2 assessment.
Evidence tool: Mini-whiteboards ☒ Assessment: ☒ Diagnostic ☐ Formative ☐ End Grouping: ☒ Individual ☐ Pair ☐ Group	Evidence tool: Practical / performance task ☒ Assessment: ☐ Diagnostic ☒ Formative ☐ End Grouping: ☐ Individual ☐ Pair ☒ Group	Evidence tool: Peer-assessment checklist ☒ Assessment: ☐ Diagnostic ☒ Formative ☐ End Grouping: ☐ Individual ☐ Pair ☒ Group
Resources: Story slide; whiteboards.	Resources: GIMP; images from pack; QR videos aCT4, hCYG, WCUC, KCIT, oCOW; station cards.	Resources: Teams channel; card template.
Support (low performers / SEN): Picture story with key words: flash, tilt, dull.	Support (low performers / SEN): Station cards with screenshots; peer helper at each station; aim for 2 stations.	Support (low performers / SEN): Template with headings filled.
Stretch (fast learners / gifted): Explain why red eye happens (light reflecting off the retina).	Stretch (fast learners / gifted): Hide an unwanted object with Clone so no one can tell; compare .png vs .gif file sizes.	Stretch (fast learners / gifted): Add a 'common mistake + fix' box.

3 PREPARE — What do I need to do so students can succeed?	4 RESPOND — What will I do with what I see and hear?
Set students up to succeed: ☒ Hook / prior learning ☒ Explain or model ☒ Success criteria shared ☒ Key vocabulary / examples ☒ Real-life connection ☒ Clear instructions / resources ☒ Praise, recognition and reinforcement planned	If students struggle or finish early I will: ☒ Re-teach ☒ Regroup ☒ Give extra support ☒ Stretch ☒ Have students redo / improve
My setup / modelling: Time: 6 min Hook: three damaged photos (dull, tilted, red eye). Model in 1 minute each: Colors > Color Balance by range; Measure tool > Straighten; select eyes > Filters > Enhance > Red Eye Removal; Ctrl+click clone source. Show the export routine: File > Export As > type > Export. Explain station timer.	What I will watch for / likely responses: Color Balance without choosing a range; measuring a vertical line; Red Eye without selecting eyes; Clone source not set; 'Save' vs 'Export' confusion; .gif losing colours. Likely: over-saturated colours - ask 'Does it look natural?'
What is new or innovative in this lesson? <i>(ETEC looks for this)</i> Four-station repair lab plus a student-made help library on Teams that is reused for assessment revision.	Close / exit check <i>(summative + time for learners' questions)</i> Time: 7 min Exit ticket (Forms): which menu holds Color Enhance; Clone belongs to which tool group; why did the .gif look different? Learners' questions.
Progress recorded / shared: ☒ Gradebook ☒ Parents ☒ Written feedback in notebook / portfolio	Homework / platform <i>(e.g. Madrasati)</i> Madrasati: upload one before/after repaired photo. Complete Unit 2 'Match the following' and 'Fill in the blanks'.

5 REFLECT — After the lesson <i>Complete within a day. This is reflective-practice evidence and feeds your next Starting point.</i>		
What worked — and how do I know? Stations moved quickly with timers; repair cards used Arabic + English labels, which helped EAL peers. Most completed 3 of 4 stations.	What will I change next time? Four stations in one period is tight: give a 1-minute reset and let slower groups do 2 stations. Explain the .gif palette limit before station 4.	Students needing follow-up: 10/1, 10/5: a few students confused Clone with copy/paste. Parents of 3 students informed about missing uploads.

Pacing (2-1-1-2): ☒ On plan ☐ Ahead ☐ Behind Weeks ahead / behind: 0 Week / lesson: Week 8 / Lesson 2 of 2		Starting point (2-2-1-3): What did my last check (quiz, exit ticket, homework) show — and what am I changing today because of it? Repair stations: 3 of 4 done by most; .gif palette now understood. Today we move to video, starting with resolution and aspect ratio numbers.		

1 OUTCOMES — What must students learn?

Desired learning outcome(s) — trace to the curriculum / standard and the table of specifications (ToS)

Students set a project profile in OpenShot (resolution, aspect ratio, frame rate), import media files and modify clips on the timeline (trim, split, arrange, transitions). Sprint 2.3 obj. 1-3; ISTE 6.a.

Key knowledge / skill / understanding:

Profile = resolution + aspect ratio + fps; timeline tracks layer media; transitions join clips.

Success criteria — what will successful learning look / sound like?

I can pick a suitable profile and explain resolution, aspect ratio and frame rate; I can import media, trim/split clips and add a transition.

Likely misconception / access or challenge need:

Higher fps always better; aspect ratio = resolution; editing the original files.

2 PROOF — What will students do to show they have learned it? Three activities, each with a DIFFERENT strategy, resource and evidence tool. Then tick the Coverage Check on page 2.

ACTIVITY 1 student task + evidence of learning	ACTIVITY 2 student task + evidence of learning	ACTIVITY 3 student task + evidence of learning
Strategy: Discussion / dialogue ☒ Time: 8 min	Strategy: Modelling / worked exam ☒ Time: 20 min	Strategy: Role play ☒ Time: 8 min
What students will do: Compare a 16:9 and a 9:16 clip of the same scene. Discuss: Which platform suits each? What do 1920x1080 and 30 fps mean? Calculate frames in a 10-second clip.	What students will do: Follow along: create a project with a chosen profile, File > Import Files, drag clips to tracks, trim and split with Razor, reorder, add 2 transitions between clips. Save project.	What students will do: Pairs: 'client and editor'. Client gives a 15-second brief (e.g., school sports day reel); editor explains which profile and transitions they would choose and why.

Resources: Two sample clips; profile info slide.	Resources: OpenShot; sample videos go.qubitscs.com/vXP1; QR install 338u.	Resources: Brief cards; checklist.
Support (low performers / SEN): Glossary card: resolution, aspect ratio, frame rate, with diagrams.	Support (low performers / SEN): Clips pre-downloaded; step card; work with 2 clips only.	Support (low performers / SEN): Brief cards with choices to pick from.
Stretch (fast learners / gifted): Compare data size of 24 vs 60 fps for the same clip.	Stretch (fast learners / gifted): Use 4 clips and match transition style to the story.	Stretch (fast learners / gifted): Editor adds a justification using numbers (fps, resolution).

3 PREPARE — What do I need to do so students can succeed?		4 RESPOND — What will I do with what I see and hear?	
Set students up to succeed: ☒ Hook / prior learning ☒ Explain or model ☒ Success criteria shared ☒ Key vocabulary / examples ☒ Real-life connection ☒ Clear instructions / resources ☒ Praise, recognition and reinforcement planned		If students struggle or finish early I will: ☒ Re-teach ☒ Regroup ☒ Give extra support ☒ Stretch ☒ Have students redo / improve	
My setup / modelling: Time: 6 min Hook: 15-sec school-event reel made in OpenShot. Model: Choose Profile; import; drag to track; Razor tool; drag-to-overlap transition; save .osp. Name the panels (Project Files, Timeline, Preview). Share success criteria.		What I will watch for / likely responses: Wrong profile mismatch leading to black bars; clips placed on the same track overlapping by accident; not saving project; OpenShot crash on slow PCs (save often). Response: 'the video looks stretched'.	
What is new or innovative in this lesson? <i>(ETEC looks for this)</i> Role play client/editor brings real-world media-industry language; numeracy through fps x seconds and resolution calculations.		Close / exit check <i>(summative + time for learners' questions)</i> Time: 8 min Exit ticket: 1) define aspect ratio 2) frames in 12 s at 25 fps 3) one transition you used. Learners' questions.	
Progress recorded / shared: ☒ Gradebook ☐ Parents ☒ Written feedback in notebook / portfolio		Homework / platform <i>(e.g. Madrasati)</i> Madrasati: plan a 20-second video (storyboard of 4 frames) on 'My culture in 20 seconds' - photos/clips must be your own or royalty-free.	

5 REFLECT — After the lesson <i>Complete within a day. This is reflective-practice evidence and feeds your next Starting point.</i>					
What worked — and how do I know? Numbers made sense when calculated with the real clip; role play produced good vocabulary. Most saved a project with 2 transitions.		What will I change next time? OpenShot was slow on 6 PCs - install check before the lesson and keep clips short (under 30 s). Give the profile glossary earlier.		Students needing follow-up: Students with no OpenShot at home: provide lab time on Tuesday break. 10/3: 2 SEN students need 1:1 check on the timeline.
