MRISB 4-STEP LESSON DESIGN | UbD × ETEC

OUTCOME → PROOF → PREPARE → RESPOND → REFLECT *Plan the learning first; let the checklist follow. Click a field to type · click a box to tick it.*

Teacher	Subject	Grade / Section	Date / Period	Unit / Topic
Mr. Ashraf Elbialy	Computer Studies (DigiChamps L10)	Grade 10 - Classes 10/1 to 10/6	Wk 11 (1-5 Nov 2026) - Period 1	Unit 3 - 3.2 Styling the Game Page

Pacing (2-1-1-2): ☑ On plan ☐ Ahead ☐ Behind

Weeks ahead / behind: 0 **Week / lesson:** Week 11 / Lesson 1 of 2

Starting point (2-2-1-3): *What did my last check (quiz, exit ticket, homework) show — and what am I changing today because of it?*

Game pages complete for ~85%; gallery homework shows good layouts. Today: CSS Flexbox, then style the index and game pages in one period.

1 OUTCOMES — What must students learn?

Desired learning outcome(s) — *trace to the curriculum / standard and the table of specifications (ToS)*

Students use CSS Flexbox (display:flex, justify-content, align-items, gap, flex-wrap) to lay out and style the index page and the game page (glove area, holes, score). Sprint 3.2 obj. 1-4; CSTA 3A-AP-16, 3A-AP-21.

Success criteria — *what will successful learning look / sound like?*

I link style.css; I use at least 4 flex properties correctly; my glove area highlights the selected glove; my game page works at laptop and phone widths.

Key knowledge / skill / understanding:

Selectors target elements; Flexbox arranges items on a main and cross axis; classes reuse styles; flex-wrap helps responsive layout.

Likely misconception / access or challenge need:

justify-content and align-items are the same; flex goes on the child; fixed pixel widths are responsive.

2 PROOF — What will students do to show they have learned it?

Three activities, each with a DIFFERENT strategy, resource and evidence tool. Then tick the Coverage Check on page 2.

ACTIVITY 1 *student task + evidence of learning*	ACTIVITY 2 *student task + evidence of learning*	ACTIVITY 3 *student task + evidence of learning*
Strategy: Gamification **Time:** 8 min	**Strategy:** Project-based task **Time:** 23 min	**Strategy:** Cooperative learning **Time:** 6 min
What students will do: Flexbox challenge: teams predict the flex rule that moves projected items into place, then test it live.	**What students will do:** Style the project: index page centred with flex; glove customisation area with a .selected state; game page holes grid, score board and tray using the project CSS guide.	**What students will do:** Pairs test each other's pages in DevTools device mode and record one layout issue + fix.
Evidence tool: Mini-whiteboards Assessment: ☑ Diagnostic ☐ Formative ☐ End Grouping: ☐ Individual ☐ Pair ☑ Group	**Evidence tool:** Rubric Assessment: ☐ Diagnostic ☑ Formative ☐ End Grouping: ☑ Individual ☐ Pair ☐ Group	**Evidence tool:** Peer-assessment checklist Assessment: ☐ Diagnostic ☑ Formative ☐ End Grouping: ☐ Individual ☑ Pair ☐ Group
Resources: Flexbox practice page; display board.	**Resources:** VS Code; QR 'Flex properties', 'Design the glove customization area'; project CSS sources.	**Resources:** Browser DevTools; checklist.
Support (low performers / SEN): Property card with arrows for the two axes.	**Support (low performers / SEN):** Starter CSS with blanks to fill (justify-content: ___).	**Support (low performers / SEN):** Checklist with pictures of good/bad layout.
Stretch (fast learners / gifted): Combine 3 properties in one answer.	**Stretch (fast learners / gifted):** Add a media query for under 600 px and CSS variables for a colour palette.	**Stretch (fast learners / gifted):** Suggest the exact CSS property to change.

3 PREPARE — What do I need to do so students can succeed?

Set students up to succeed:

☑ Hook / prior learning ☑ Explain or model ☑ Success criteria shared

☑ Key vocabulary / examples ☑ Real-life connection ☑ Clear instructions / resources

☑ Praise, recognition and reinforcement planned

My setup / modelling: Time: 6 min

Hook: the same page without and with CSS. Link the stylesheet live. Draw main and cross axes on the board; model display:flex, justify-content, align-items, flex-wrap with instant refresh. Show the .selected class for gloves. Share rubric.

What is new or innovative in this lesson? *(ETEC looks for this)*

Students learn flex through a team game, then apply it straight to their own game, testing responsiveness with DevTools.

Progress recorded / shared:

☑ Gradebook ☐ Parents ☑ Written feedback in notebook / portfolio

4 RESPOND — What will I do with what I see and hear?

If students struggle or finish early I will:

☑ Re-teach ☑ Regroup ☑ Give extra support

☑ Stretch ☑ Have students redo / improve

What I will watch for / likely responses:

Stylesheet path wrong (no styling); flex applied to the child not the parent; images not showing (wrong path); spending all the time on colours. Likely: 'nothing moves'.

Close / exit check *(summative + time for learners' questions)* Time: 7 min

Exit ticket: given a layout picture, write the 3 flex properties needed; name one responsive technique used. Learners' questions.

Homework / platform *(e.g. Madrasati)*

Madrasati: finish styling; upload screenshots at laptop and phone widths. Read student book on event listeners.

5 REFLECT — After the lesson *Complete within a day. This is reflective-practice evidence and feeds your next Starting point.*

What worked — and how do I know?

Gamified start worked; most applied flex correctly after the axis drawing. Several students used colours from their national flags thoughtfully.

What will I change next time?

Two sprints' styling in one period is tight: set a 12-minute checkpoint for the index page before moving to the game page.

Students needing follow-up:

Students with broken image paths (approx. 3 per class) and SEN students need a 1-page CSS reference.

COVERAGE CHECK *Tick where each must-have happens (1 · 2 · 3 = activity, C = close, H = homework). An empty box is a gap to fix before teaching. Literacy and numeracy apply in every subject.*
